MEDIA RELEASE

PRELIMINARY REPORT INTO RADIOFREQUENCY AND 5G SAFETY

February 8, 2021 – Hamilton, Bermuda: The Regulatory Authority of Bermuda, (“the RA”) has published its Preliminary Report into Radiofrequency and 5G Safety and is inviting the public to review the report and provide feedback.

In October 2020, the RA conducted a public consultation to determine whether 5G technology is suitable for deployment in Bermuda. An independent Advisory Panel was formed to offer their advice and expertise in radiofrequency wireless technology for Fifth Generation (“5G”) technologies. The Panel was also required to review responses from the public and to provide a final report, containing their recommendations to the RA’s Board of Commissioners (“BOC”).

After reviewing and assessing all information, the BOC has approved the publication of the Preliminary Report for added feedback. The public, including electronic communications sectoral participants, sectoral providers, and other interested parties are invited to review the document and provide their feedback **before 11:59 p.m. on Monday, March 8, 2021.**

Please visit www.ra.bm and select the ‘[RESPOND TO AN OPEN PUBLIC CONSULTATION](#)’ button on the homepage to access the document.
