

*Five things you should know about renewable energy:*

1. Solar and wind are renewable sources of energy, meaning the supply is unlimited as long as the sun is shining and the wind is blowing.
2. Renewable energy is cleaner and safer for the environment than burning fossil fuels.
3. Natural energy sources like solar and wind are more accessible than fossil fuels such as coal, natural gas and petroleum.
4. The Earth has a limited supply of fossil fuels and they must be mined from the ground, which is expensive and risky.
5. The cost of running and maintaining a renewable energy plant is much less than a plant that burns fossil fuels to produce electricity.
